

Piscine Discovery

Rush

Summary:

Create an original website on any topic of your choice while practicing HTML, CSS, JavaScript, responsive design, and teamwork.

Version: 4.0 - Creative Web Project

This subject is intended for use within the 42 Bangkok campus.

42 Bangkok - Discovery Piscine Web Programming Essentials

Chapter I

Foreword

The best websites often start with a simple idea. It might be something you love, something you want to share, or a problem you want to solve.

This Rush gives your team the opportunity to turn that idea into a functional website. You decide the topic, structure, content, and visual identity.

There is no single correct design. What matters is that you make thoughtful choices, write working code, and can explain what you have built.

Be curious. Experiment. Build something you are proud to show!

Chapter II

General Instructions

Unless otherwise specified, the following rules apply to this Rush.

- This subject is the official source for project requirements.
- This Rush must be completed in a team of **two members**. Both members must participate.
- You must use **HTML, CSS, and JavaScript** to build your website.
- Your project will be evaluated based on the mandatory criteria and your ability to explain your work.
- You may use online documentation, libraries, frameworks, images, and other learning resources.
- You must understand and be able to explain the code and external resources used in your project.
- Ask your peers, discuss ideas, experiment, and use Discord when you need support.
- Check that all required files are correctly saved in your submission folder.
- Your website must run locally in a standard web browser.

Chapter III

Mandatory Part

At the end of your web programming training, you and your teammate must create a **website on any topic of your choice**. The idea and design are entirely up to you.

Your website may be about a restaurant, travel destination, game, movie, online shop, event, education, personal interest, or any other topic you can imagine. These are suggestions only, not required themes.

You may build a **one-page website or a multi-page website**. In either case, your finished project must satisfy **all** of the minimum criteria below.

Minimum Criteria

1. Website Structure (HTML)

- At least **three distinct content sections** relevant to your chosen topic.
- A clear website title or main heading.
- Appropriate HTML elements to organize the content.
- At least **one relevant image**.

2. Navigation Bar

- A navigation bar with links to sections or pages of your website.
- The navigation bar must remain visible while the user scrolls (**sticky or fixed**).
- All navigation links must work correctly.

Chapter III

Mandatory Part (cont.)

3. Styling and Responsive Design (CSS)

- Use CSS to customize the website appearance.
- Maintain a consistent visual style, including colors, fonts, and layout.
- Make the website **responsive** and usable on both desktop and mobile screens.
- Organize content clearly so it is easy to read and navigate.

4. JavaScript Interactivity

- Include at least **one working interactive feature** implemented with JavaScript.
- The feature must respond to a user action, such as clicking, typing, or selecting.

Examples: a dark/light mode button, image slider, show/hide content, quiz, interactive form, or another feature that suits your concept.

5. Functional Website

- The website must open and display correctly in a web browser.
- Links, buttons, and interactive elements must work as intended.
- There must be no major errors preventing normal use.
- Use meaningful content instead of empty sections or placeholder text.

Chapter III

Bonus & Presentation

Bonus Features (Optional)

After completing every minimum criterion, you may improve your project with extra features such as:

- Multiple connected HTML pages.
- Additional JavaScript interactions or filtering features.
- CSS animations, transitions, or visual effects.
- Accessibility enhancements or original creative features.

Bonus features do not replace mandatory requirements.

Final Presentation

At the end of the Rush, each team should be ready to:

- Introduce the website concept and explain its purpose.
- Demonstrate the website and its main features.
- Explain how HTML, CSS, and JavaScript were used.
- Describe the contributions of both team members.
- Answer questions from the evaluators.

Chapter IV

Submission and Peer-Evaluation

- In the **discovery-piscine** folder at the root of your home, create a new **rush** folder.
- Place all files needed to run your website in the **rush** folder.
- Include an **auteur** file at the root of the submission folder containing both team members' logins, one per line, each followed by a newline.
- Check that your website works using only the files submitted.

```
$> cat -e auteur
xlogin$
ylogin$
$>
```

Important: During the defense, work that is not present in your submitted folder will not be evaluated.

Your peers and evaluators will check the website against the minimum criteria and ask your team to explain how it works.
